

Pilot Hole Driver

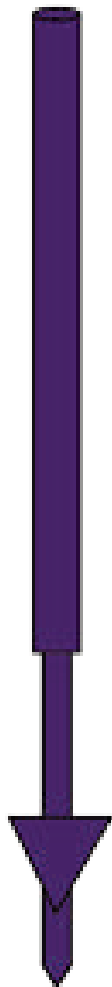

The Pilot Hole Driver is a great way to assist in the installation of flat posts in difficult soil conditions and rough terrain. In areas with hard-pan or rocky soil, the sliding action of the pilot hole driver will make installation much easier. The Pilot Hole Driver creates a starter hole that can be used in conjunction with Rhino's Flat Post Driver (FPD-44-A).

Durable

The Rhino Pilot Hole Driver is composed of heavy-duty steel and is designed for easier flat post installation, increasing marker post stability.

Installation

1. Align driver spade in the position you wish the marker to face.
2. Use blows until spade is driven into the ground and driver stop is level with the ground.
3. Remove driver with upward stroke and proceed with normal installation.
