

Rhino HIT Kit+2™

Fact Sheet

For larger damage investigation areas.
Part# HK220

The Rhino HIT Kit +2™ is used to enhance root cause investigations and to accurately record damage to buried facilities such as fiber optic cable, pipelines, electrical lines, and more. Use of the HIT Kit +2™ allows for consistent photographing of a large area for damage reporting by using a standard tool to record every accident which can reduce unnecessary and costly legal actions when damage occurs. It also assists in identifying locate marks for a clearer depiction of the scene.
